What is a Masternode?

A **Masternode** is a series of servers enabling a network. They are used to validate transactions that ordinary servers can't handle. They allow features like private transactions, direct send and governance, so if nodes appear to be kids, we can consider Masternodes as Parents.

When you run a Masternode, you have to hold or “**Stake**” your coins and receive passive income called “**Masternode Reward**”.

*We are currently collaborating with the "Blockchain Ozeety".
